

# DIGITAL MOTOR CHECKER EMC-38

**Electric Motor, Generator and Transformer Trouble Shooter**  
**Know in a few minutes what the problem is: Electrical or Mechanical?**  
**Coil or Rotor, Internal Fault or Ground Fault ?**

## Features:

- ❖ Insulation Resistance (IR) Measurement
- ❖ Identify open and short circuits / loose connections in a winding coil
- ❖ Identify inter turn shorts.
- ❖ Detect rotor bar problems without dismantling the rotor
- ❖ Inductance of the winding with respect to different positions for rotor for detecting blow holes or cracks in the rotor bars.
- ❖ Simple operation, accurate & quick assessment of motor condition.
- ❖ Shock Proof Rubber Casing

## Fast Checks of On-Site Motors:

EMC-38 is a Digital portable diagnostic tool for Electrical Engineer and is used for quick on - site checks of electric motor and other three - phase machines.

A reduction in machine performance, such as inefficient operation or tripping of overloads, may indicate mechanical or electrical faults. If the fault is electrical the EMC-38 will immediately detect it, without having to dismantle the equipment.

The instruments has three separate operating modes to measure different types of faults like fully insulation, **open circuits / loose connections, short circuits** and **rotor defects**. Motor insulation is tested with a high voltage at **500V & 1000V** DC supplied by the instrument.
